

Postdoctoral research fellow – Boston Children’s Hospital

The Alejandro Gutierrez lab at Boston Children’s Hospital seeks a highly motivated and innovative individual to join our efforts to unravel the molecular basis of treatment-resistant cancers. This particular project is focused on genome engineering to investigate the role of ring chromosomes in sarcomagenesis, leveraging the zebrafish model of liposarcoma we previously generated.

The ideal candidate is a recent PhD graduate with strong communication, organization and interpersonal skills. Formal training in genetics, cell biology, development, or related fields would be an asset.

To apply, please email a cover letter with brief statement of research interests, a CV, and contact information for 3 references to Dr. Alejandro Gutierrez (alejandro.gutierrez@childrens.harvard.edu).
