

Postdoctoral Fellow Position - Vanderbilt University

A postdoctoral fellow position is available in the Patton Lab at Vanderbilt University for individuals enthusiastic about pursuing research in retina regeneration.

Research areas include the role of miRNAs and exosomes in the initiation and regulation of regeneration (<https://lab.vanderbilt.edu/patton-lab/>).

Interested candidates must have a PhD and a strong record of accomplishment and experience in using zebrafish as a model system, microinjection, genetics and the generation of transgenic lines, imaging, and developmental biology.

Please send a cover letter detailing your past research accomplishments and future research goals, a full CV (with bibliography) and the names and emails of 3 references by email to:

James G. Patton
