Run a Template

For help, contact us at zfinadmin@zfin.org. To get back to ZebrafishMine, click here.

Templates are pre-defined searches. A subset of templates can be found in the middle section of the ZebrafishMine home page, divided into categories (see previous page). You can get a complete list of templates by clicking the “Templates” tab.

Do a template search:

1. Click on the “Templates” tab at the top of the home page

The template tab:

2. Scroll down the list to find the template “Gene → OMIM Disease Phenotype”.
Note: the position of the template will likely differ from the order shown here. Templates are ordered by popularity.

3. Click on the template to see the details.

This template is a search for the OMIM disease phenotypes of the curated human orthologs of the specified zebrafish gene. The default value in the search box is the "ref" gene. You can run the search for all zebrafish genes by using a wildcard (*). You can also run the search using a list of genes by selecting the “constrain to be IN” checkbox and selecting a list name from the pulldown menu.

4. Change the default value to a wildcard (*). Click the “Show Results” button to run this search.
