

# What is ZebrafishMine?

For help, contact us at [zfinadmin@zfin.org](mailto:zfinadmin@zfin.org). To get back to ZebrafishMine, [click here](#).

**ZebrafishMine** is powered by the **InterMine** data warehouse system, and integrates biological data sets from multiple sources.

**ZebrafishMine** currently includes weekly updates of data from **ZFIN**, the zebrafish model organism database. There is also data from the **Panther** database.

Some of the features of **ZebrafishMine**:

**Search:** type in an identifier to see a report page.

**Template queries** are pre-made queries that provide a simple form to perform a specific task. You can create your own templates if you log in.

**Lists:** you can operate on whole lists of data at once. You can upload lists or save them from results tables. We also create public lists for everyone to use.

**The QueryBuilder** lets you create custom queries and edit existing templates.

**MyMine** lets you create an account to save your own queries and templates, as well as marking public templates as favorites.

All these features are accessible from the toolbar on every **ZebrafishMine** page:
